

Keg & Pallet Tracking

Improve efficiency with user-friendly web and mobile software

Stay in control with RF Identity

Standardizing Your Processes

Standardizing your processes in tracking, delivery confirmation and inventory control can easily identify and eliminate the costly errors from origination of the product to number of day at the customer's location. From order origination to point of sale the keg is never out of touch due to tracking through customizable alerts and tracking of the products.

“ With RF Identity, our business is streamlined, efficient, productive and innovative...our clients love the benefits and our business is thriving. ”
- Melanie, Operations Manager, Parkland

Automate Inventory

RF Identity streamlines your business process allowing for a flow of information from when the order was placed until it leaves the facility. RF Identity inventory system tracks your supplies to ensure they remain at an optimum level for operation. This gives management the tools it needs to keep business running smoothly and eliminates overstocking.

Trackin Your Daily Production

RF Identity eliminates the challenge of order verification. Our tracking solution delivers instant order information started order arrives at the office. Your order status can easily be pulled up allowing the customer to maintain their schedules based off of on time deliveries.

Eliminate Stale Kegs

By tracking production and inventory dates RF Identity allows you to maximize production per product eliminating the dreadful stale kegs that eliminates losses due to lack of inventory tracking. A spin off benefit is delivered products can be accessed per customer to avoid the returned keg as you now have back up for companies not using the FIFO model.

Billing System

Through an advanced financial component companies can manage account receivables to the customer. Our billing module allows for a quick turn around by automatically sending invoices based off of a delivery backed up by digital signature verification. Customized exports to your ERP system is the final layer, thereby eliminating all manual data entry.
