Monitor Facility Access

Companies and employees today are faced with a fast paced, constantly changing environment where priorities shift almost hourly. In the hustle and bustle of this environment it's no wonder we sometimes take shortcuts and unknowingly allow access to key security areas or allow employees to access high-risk areas without the proper PPE due to a lack of technology. Are you worried that you employees are making sure they're wearing the correct PPE? Do you know who's in your facility and in case of emergency, are you concerned you cannot verify everyone's location? If so, RF Identity has solutions to help.

Keep Employees Safe

By using RF Identity you can verify employees entering high-risk areas with the appropriate PPE. When an exception occurs, email and text can be sent to alert key personnel. Avoid 'buddy-punching' as RF Identity has designed a system to detect multiple employee entrances using one scan. Keeping your employees safe is our key performance metric.

Facilities Management

By placing RFID readers throughout the facility you can create 'zones' and ascertain employee and asset locations through these zones. For emergency situations, create muster points and the RF Identity system can verify employees are safe. Assign rules to allow only certain employees access to secure areas, getting real time alerts for security breaches, keeping your facility safe even if when you're not there.

Reporting and Real Time Alerting

Through quick reports and alerting you can quickly inform your safety team of unnecessary liability through employee non-compliance. Prove compliance through historical reports and dashboards.

Avoid Costly Incidents Reduce Insurance Cost

By putting that additional layer of security in your facilities you can reduce injuries and accidents. Having the ability to prove PPE compliance through our reporting and dashboarding, you can reduce your insurance premiums saving you money and driving up profits.
