RFID Solutions That Drive Business

Our Solutions Build the Technology Bridge Between:

Time and Attendance Tracking

Asset & Material Tracking

Safety Compliance Tracking

INTEGRATE NOW

Advanced RFID Solutions, Software Development and API Integration Services.

Our team of experienced software developers and consultants will work with you to develop a scalable, customizable enterprise solution.

Automate Billing Systems

Streamline your business process by creating a flow of information from when the order was placed until it leaves the facility. Each item is uniquely identified with an RFID tag. Through our billing module, companies can manage accounts billable to the customer through an advanced financial component. The final layer is eliminatining all manual data entry. RF Identity builds custom exports to accounting allowing companies to generate bills for their customers' approval. Our comprehensive invoicing system inclludes alerts to outstanding customers' invoices and makes accounts payable an easy to use and streamlines process.

Automatically Track Extra Work

With our time and material component, tracking work is as simple as scanning the item & tapping 'start service'. A timer automatically keeps track of how much time is spent on servicing the item. Clicking done will send that information to the order without the need for any manual data-entry. This feature reduces erros and captures all time spent servicing items.

Automate Ordering Systems

As bags of items arrive, all clothing is checked with a quick scan of the reader. This removes the costly practice of manually checking all items. You can easily verify customers claims vs. actual contents, which eliminates costly errors and unhappy customers.

Here is our workflow:

- Review completed orders vs. incoming orders
- Obtain status reports
- Review orders by date & daily production
- Easily obtain information on items still in process
- Analyze order production to ensure work force is adequate

Communicate, Communicate, Communicate

In this day & age, communication is key. Automatically text or email your customers when an order is complete. No more calls asking if an order is ready. Using the unique RF Identity solution, provide your customes with web site access so they can view dashboards and reports. Viewing aged orders & suggesting items needing replacement are just a few of the information bits you can give your customers so the keep coming back.
