# RFIDENTITY™

Employee and Equipment Tracking

Improve Efficiency with user-friendly web or mobile software • **Increase the bottom line by reducing payroll errors**

Increase The Bottom Line

Today's workforce is operating within a fast paced, mobile environment, which presents numerous challenges to management. Conventional time clock systems allow room for error and buddy punching. *RF Identity* has created a set of tools designed to help organizations stay up to speed. Standardize your payroll process by monitoring the location of your employees.

Proud Partner with Alien Technologies ⩘ALIEN®

Top Benefits

- ✓ Track employee hours
- ✓ Export to accounting
- ✓ Tracking T&M hours
- ✓ Track employee location within facility

- ✓ Track hours worked on jobsite billable hours with GPS location - servicing
- ✓ Automate payroll
- ✓ Mobile app compatible
- ✓ Internet connection not needed

📍 111 Congress Ave, Ste 400 Austin, TX 78701 📱 800.461.0408 🌐 www.rfidentity.com

Standardize your T&M payroll process

We have developed a user interface that accurately records the location of people wearing our tags, which are automatically tracked and logged as they move in a predetermined perimeter. This feature eliminates the abuse if time clock or "buddy punching". This one point of enter approval process also replaces manual data entry. This includes logging of billable hours, tracking T&M hours, or inventory location data. The potential applications are too numerous to list.

Interface with other devices and software

The data that is collected can easily be exported to accounting software. Our consultants will meet with your company's representatives to determine the ideal size and scope of your implementation. We will assist with establishing your network parameters and enter pertinent employee data. The easy to use mobile app for iPhones and iPads will help you access this data and provide the specific GPS coordinates for the provided tags.

Track and ensure employee accountability in real-time

RF Identity software enables the user to monitor the GPS location of employees and guests using Radio Frequency Identity tags and readers. The seamless integration process results in increased transparency and security throughout the workplace. RF Identity creates customized accounting exports with no data entry needed standardizing payroll.

Improve security and reduce risks when time counts

In the event of an evacuation or emergency, every second counts. RF Identity will help first responders determine who is accounted for and who needs to be found. The software can provide real time data of last known locations within the pre-determined perimeter. Our products are guaranteed to increase visibility, compliance, and productivity or we will return your money.
